Comparing Frequency Distributions: Takeaways

by Dataquest Labs, Inc. - All rights reserved © 2019

Syntax

• Generating a grouped bar plot:

• Generating only the shape of the histogram for two **series** objects:

```
Series_1.plot.hist(histtype = 'step')
Series_2.plot.hist(histtype = 'step')
```

• Generating kernel density plots for two Series objects:

```
Series_1.plot.kde()
Series_2.plot.kde()
```

• Generating strip plots:

• Generating multiple box plots:

Concepts

- To compare visually frequency distributions for nominal and ordinal variables we can use **grouped bar plots**.
- To compare visually frequency distributions for variables measured on an interval or ratio scale, we can use:
 - Step-type histograms.
 - Kernel density plots.
 - Strip plots.
 - Box plots.
- A value that is much lower or much larger than the rest of the values in a distribution is called an **outlier**. A value is an outlier if:
 - It's larger than the upper quartile by 1.5 times the interquartile range.
 - It's lower than the lower quartile by 1.5 times the interquartile range.
